Citrix Files Drive

Conflict Resolution

The following options are available in the **Settings** menu.

Account

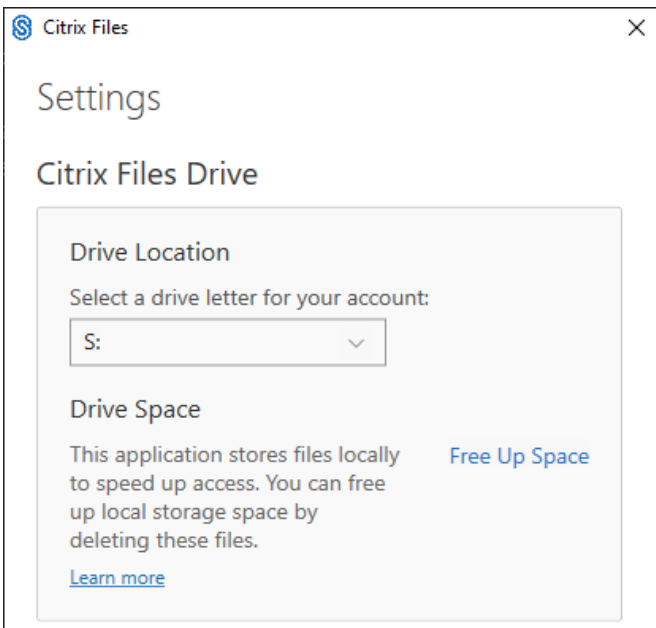

Sign Out - Signs you out of your Citrix Files account. Cached files are deleted.

Launch on Startup - Allows the application to start automatically after starting Windows.

Reset app - Allows you to reset the application to the original default settings.

Citrix Files Drive

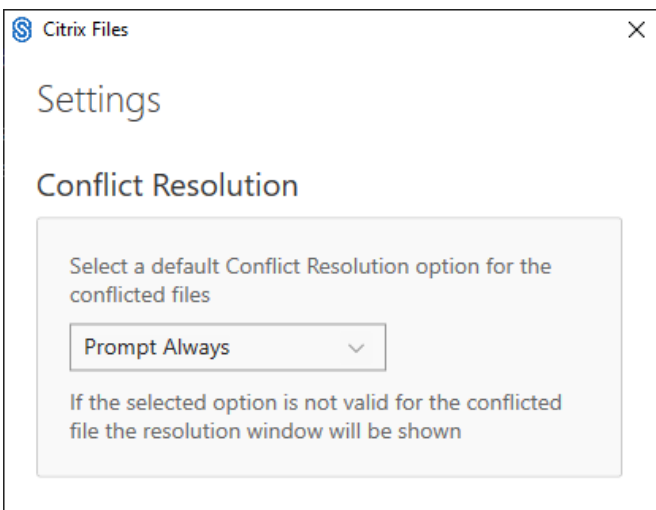

Drive Location - Allows you to select a drive letter for your Citrix Files account. Default is "S."

Drive Space - Files made available offline take up space on your local device. Use the **Free Up Space** option to remove files that are stored locally.

NOTE:

For more information on file status, see [Icon overlays](#).

Conflict Resolution

This setting allows you to select a file conflict option.

- **Prompt Always:** Prompts you to review the conflicted files.
- **Overwrite:** This option overwrites the existing file with an updated file.
- **Discard:** Discards the changes being made to the existing file.

TIP:

We recommend you save a copy of an uploaded file to ensure you don't lose the file changes.

- **Save a Copy:** This option creates a copy of the conflicted file so both files remain.
